To: Stefanie Gangone <treklongisland@gmail.com>

Hello Stefanie,

I hope you are doing well. In order to use technology as a modality to promote accessibility for those with adaptive concerns and to be kind to those guests, I have created a series of Google Calendars that participants can subscribe to get a digital 'readout' of the convention based on the public Event Schedule as of May 15th. I have already shared full access to you to do with it as you see fit so you might get a few emails with the permissions.

Respectfully,
Bryan Carroll

Below are link you can share publicly if desired:

Oh my goodness! Wow thank you so much. I want to give you credit for your work. Is that ok? Is there anything you want me to include?

Thank you!
Stefanie

Stefanie:
If you want to credit me, feel free to say, "BC." While some convention goers want an ad supported physical schedule as a flyer, I can understand the cost for that and the reluctance of physical media and preference to adopt new technologies. I thought folks could use their 'tricorder' to scan this for immediate updates instead of always sourcing the schedule online. By scanning all of them, they can subscribe to and always have the latest calendar right on their PADD. I was also able to create a series of QR codes that you can have at Check-in or at the information desk for people to scan to add the google calendar of their choice. That QR code flyer is attached to this email. It can be modified to match other marketing collateral.

If you could please just let me know when the schedule is updated with any fine tuning so I can update the google calendar. These google calendars are already live right now so if you want to use them or advertise the capacity, feel free. I have already transferred the ownership of these calendars to you so we can move them to a unique email address if you have one for on site questions.

Best,
Bryan Carroll

I am working on completing the schedule today. I have 1000 questions for you on how this works. Do I just update the sheets you sent me?

Im also working on creating large print schedules. I don't have access to a braille machine

Feel free to ask questions. More questions the better.

If you have a word document that has schedule changes, I can pull from that copy. If you feel more comfortable just updating the website calendar, that would be great too. I will manually review the website calendar and update the Google Calendar accordingly to reduce any confusion or anxiety.

I can create a QR code for ease of use that opens a web browser on people's phone or tablet that goes directly to the Main Schedule on the website. My only worry is that the website might not have a mobile friendly interface. If we post a QR Code and Daily Calender in each room, participants can see what was scheduled for that day.

I created the Google Calendar because in some areas of the hotel, Wi-Fi is not very good and the website loads slower than a particular text only app (like Google Calendar) and this allows them to subscribe to Room Specific Calendar. If they subscribe to all of them, they see a duplication of the Main Schedule within the Google Calendar app with any 'pushed'

changes automatically. It will provide us the option to notify individuals' phones if they have that setting turned on of any scheduling changes within a few minutes. You're able to reuse these Google Calendars for future years too.

It will allow people their choice of modality, printed or digital. Some prefer a printed booklet (binded daily calendar) because it also allows for advertising inserts, thanks etc., notes pages. The printed booklet could also have the braille. Braille embossers are usually pricey. But you use free online tools like: <https://www.abcbraile.com/text> to convert digital text to braille or this website: https://jenniferdewalt.com/text_to_braille/converter.

Instead of large print schedules, you could use the free Mango Display app on an Amazon Fire Stick plugged into a TV that pulls from the Google Calendar. Just thinking of cheaper alternatives.
